TYHEE UPDATES YELLOWKNIFE GOLD PROJECT, WINTER ROAD STATUS AND DIAMOND DRILL PROGRAM

VANCOUVER, British Columbia (February 26, 2008) -- Tyhee Development Corp. (TSX Venture, TDC) (the "Company") updates the status of its Yellowknife Gold Project and diamond drill program.

The winter road to the Yellowknife Gold Project has now been completed and is open for traffic at maximum capacity. Tyhee has commenced its resupply for the year which should be completed by the end of March. The winter road also provides access to the BigSky, Clan Lake and Goodwin Lake zones.

Diamond drilling commenced on January 4th and was suspended for 1 week due to extreme cold conditions (see NR S9 R3). Three of the four drills were restarted over the past two weeks, with the fourth drill restarting earlier this week. The drill on the Yellowknife Gold Project has been moved to Clan Lake, where the first two holes have recently been completed. Clan Lake will continue to be drilled with one rig active through March. Three drills are operating on the BigSky Property.

To date, seventeen diamond drillholes, totaling over 2,900 metres, have been completed on BigSky, four holes have been released and thirteen holes have assays pending and will be released when received.

Four drillholes have been completed on Goodwin Lake and final assays are pending.

In 2007 a total of 129 diamond drillholes from the Nicholas Lake Zone were assayed for gold plus tungsten. The data has been compiled and a revised resource estimate is nearing completion with the results anticipated within 4 weeks. The deposit is being evaluated as both an underground as well as an open pit resource, with ongoing economic modeling to determine the best development option.

A total of 108 diamond drillholes were completed on the Ormsby and Bruce Lake Zones in 2007, with the final assays from this program expected within 4 to 5 weeks. The resource will then be revised. It is anticipated this revision will take an additional 3 to 5 weeks.
